

Business Model & Expense Report

Digital Local Appointment Scheduling System (DLASS)

1. Executive Summary

The Digital Local Appointment Scheduling System (DLASS) is a platform designed to bridge the gap between local service providers (clinics, salons, repair services, etc.) and customers. By automating booking workflows, it reduces administrative overhead and eliminates the common issue of manual scheduling and "no-shows" via automated reminders.

2. Business Model

The business model is based on a **Software as a Service (SaaS)** framework, focusing on affordability for small Indian businesses.

A. Revenue Streams

- 1. Starter (Free Tier):**
 - **Features:** Basic scheduling, 50 bookings/month, email notifications.
 - **Goal:** User acquisition and product familiarity.
- 2. Basic (₹499/month):**
 - **Features:** Unlimited bookings, SMS notifications, basic analytics dashboard, customer database.
- 3. Pro (₹999/month):**
 - **Features:** Multi-staff management, online payment integration (Razorpay/Stripe), advanced scheduling rules, AI-driven booking recommendations.

B. Target Audience

- Healthcare (Clinics, Physiotherapists)
- Beauty & Wellness (Salons, Spas)
- Professional Services (Lawyers, Consultants)
- Home Services (Plumbing, Electrical, HVAC)

3. Expense Forecast (Minimum Cost Strategy)

The primary objective is to keep operational overhead low by utilizing "Free Tiers" of major cloud providers during the MVP phase.

Category	Item	Provider	Estimated Cost (INR/Year)	Notes
Domain	.in or .com Domain	Hostinger / GoDaddy	₹800 - ₹1,200	Initial purchase + annual renewal
Hosting	Backend (Spring Boot)	Render / Railway	₹0 (Free Tier)	512MB RAM, limited active time
Hosting	Frontend (React)	Vercel / Netlify	₹0 (Forever Free)	Global CDN infrastructure

Database	PostgreSQL	Neon.tech / Supabase	₹0 (Free Tier)	Scalable managed cloud DB
Security	SSL Certificate	Let's Encrypt	₹0	Included in hosting services
Email Service	Transactional Emails	Brevo (formerly Sendinblue)	₹0 (Free Tier)	300 emails per day limit
SMS Gateway	Appointment Alerts	Fast2SMS / Twilio	₹500	Pay-as-you-go (~₹0.20 per SMS)
Payment Gateway	Transaction Fee	Razorpay / Stripe	~2% per txn	No upfront cost
TOTAL INITIAL COST			₹1,300 - ₹1,700	Total for 1 Year (MVP)

4. Scalability Cost (Pro Setup)

Once the platform exceeds the free tier limits (usually >10 active businesses), the following paid infrastructure is recommended:

- **VPS Hosting:** ₹500/month (DigitalOcean Droplet or AWS Lightsail) = **₹6,000/year**.
- **Managed Database:** ₹1,200/month (Optional upgrade) = **₹14,400/year**.
- **Total Scaled Cost:** ~₹2,000/month across all components.

5. Implementation Roadmap

1. **Q1 (MVP):** Deploy on free tiers, focus on local adoption.
2. **Q2 (Growth):** Integrate paid SMS bundles for better delivery rates.
3. **Q3 (Scale):** Move to a dedicated VPS in the AWS Mumbai Region (ap-south-1) for lower latency.
